

Inconel® 625 Nickel Alloy

INCONEL 625 NICKEL ALLOY DATASHEET

Inconel® 625 nickel alloy, with a chromium-nickel and low carbon content, is used for its outstanding corrosion resistance especially at elevated temperatures. Inconel 625 nickel alloy has similar physical properties and fabrication characteristics as Type 304 at room temperature. The unique chemistry of Inconel 625 nickel alloy increases the corrosion resistance in salt water applications and against high temperature oxidation. In the medical field, it has served the MRI compatible market due to its high nickel content that keeps a low magnetic permeability even at high strengths. Inconel 625 nickel alloy is more expensive than 304, but is readily available.

Typical applications for Inconel 625 nickel alloy include marine, aerospace equipment, nuclear technology, and industrial processing.

Product forms include bar, seamless tubing, and plate.

Standards

- UNS N06625

Physical Properties

- Density: 0.305 LB/in³
- Melting Range: 2350-2460 °F (1288-1349°C)
- Modulus of Elasticity: 29.8x10⁶psi @ 70°F
- Magnetic Permeability: 1.0006 Max

Characteristics

- Exceptional material strength
- High temperature resistance
- High level of fabricability
- Excellent general corrosion resistance

Chemical Composition

	C	Mn	S	P	Si	Cr	Ni	Al	Mo	Fe	Ti	Co	Nb+Ta
